RT Environmental Services, Inc. (RT) is pleased to announce the association of RT and StormwaterRx, LLC (pronounced Stormwater RX). StormwaterRx manufactures storm water filtration / treatment Best Management Practices (BMP's) with over 100 systems installed in industrial sites across North America. These systems have been designed for industrial and municipal sites but are useful in many other applications. Specific industry types that benefit from the modular technology include:

- Scrap Yards
- Power plants
- Transportation facilities
- Boatyards
- Metal Recycling
- Truck stops
- Maintenance Yards
- Galvanizing Facilities
- Metal distributors

Facilities where yard storage of incoming/outgoing materials can impact stormwater, will find this approach to be practical, efficient and cost effective means to manage their storm water runoff. Although the preferred approach is to store all potentially polluting material indoors, it is often not realistic at many industrial and commercial sites. In addition, tighter regulations throughout the US have created a demand for practical solutions. Conventional systems are complicated and costly. StormwaterRx has created a simple product line of three types of modules that can be tailored to meet a client's needs.

The products are as follows:

Clara

This module provides basic separation including separation of oil and heavy solids from stormwater runoff. This is typically installed in the ground, near a runoff low point or at the end of an onsite stormwater gravity collection system.

Clara removes dirt, oil & floatables by gravity separation

Aquip

This is a patent pending system using passive adsorptive filtration technology designed specifically for TSD, turbidity, heavy metals, nutrients and organics from industrial sites. This is a passive system that has the advantage of no moving parts and does not use chemicals so operation is safe and reliable. It is easy to retrofit to existing systems produces a good stand-alone stormwater quality for a wide range of industries.

Aquip is typically installed above ground using a simple pump station

Purus

The most advanced system providing filtration for the most challenging pollutant removal.

Stormwater Polishing System

If your facility is processing or storing water, these systems may be very useful to you. We welcome your request for additional information.

RT Environmental offers services throughout the eastern United States and our Professional Engineers are registered in 18 states from Maine to Florida. We also provide service in the Midwest.

For more information on the StormwaterRx Treatment System, please contact RT as follows:

Sales

- Lisa Mascara can be reached at 412-997-0521 or email
