MISCELLANEOUS COATING MANUFACTURING
NESHAP RESIDUAL RISK REVIEW

EPA is proposing the results of a residual risk and technology review (RTR) of the National Emission Standards for Hazardous Air Pollutants for Miscellaneous Coating Manufacturing (MCM NESHAP) facilities, as required by the Clean Air Act (CAA). EPA has proposed to find risks due to emissions of air toxics to be acceptable from the MCM source category and to determine that the current NESHAP provides an ample margin of safety to protect public health. The EPA identified no new cost-effective controls under the technology review to achieve further emissions reductions from process units subject to standards under the NESHAP.

EPA has also proposed revisions related to emissions during periods of startup, shutdown, and malfunction (SSM), including clarifying regulatory provisions for certain vent control bypasses; provisions for electronic reporting of performance test results, performance evaluation reports, compliance reports, and Notification of Compliance Status (NOCS) reports; and provisions to conduct periodic performance testing of oxidizers used to reduce emissions of organic hazardous air pollutants (HAP).
