BIOREMEDIATION FLOATING ABSORBENT, NEW PRODUCT RECEIVES INCREASED ATTENTION

RT has recent experience in using a product called Bio-W, which is a floating absorbent, containing bioremediation agents, and enzymes. This product works well in both fresh and salt water, and can speed cleanup significantly particularly when there are "open holes", with residual product apparent, and/or impacted soils, which cannot be excavated. Here is a partial list of where the products can be used.

- Holding Lagoons
- Oil Water Separators
- Ponds
- Trailer Interiors
- Construction Sites
- Retention Basins
- Manhole Areas
- Utility Vaults
- Open Water Areas
- Trenches
- Drainage Ditches
- Oil-Water Interceptors
- Elevator Pits
- Oil Storage Areas
- Chemical Storage Areas
- Auto & Truck Wash Areas
- Shopping Malls
- Maintenance Areas
- Airports
- Vehicle Parking Areas
- Pumping Stations
- Forestry Mills
- Rail Yards
- Vehicle Maintenance Areas

We find that the effectiveness of this material is very good, and although some hydrocarbons take longer to bioremediate than others, the product begins work immediately, and it is effective even on older spills. RT stocks Bio-W for immediate deployment. We find that when the hole is open, that is the time to remediate what you are particularly on tank removal projects. Near the tank is usually where the worst contamination is.

For more information on Bio-W, and RT's experience with this material, contact Craig Herr, P.G. by phone at 610-265-1510 Ext. 215 or by email at cherr@rtenv.com.
