MODULAR STORMWATER SOLUTIONS FOR WASTE INDUSTRY SITES

Press Release

Word is getting out around the country on how functional and cost-effective StormwaterRx modules are as solutions for stormwater runoff issues of concern. At a California waste industry site, StormwaterRx modules were selected for installation at a processing site, by one of the nation's leading waste management firms. Today, waste industry collection facility centers and processing facilities, almost always operate at a high level of efficiency and performance.

Long gone are the days when "Mom and Pop" solid waste collection companies, and municipal landfills, dominated the solid waste scene. Today, in most urban and suburban areas, the waste industry is highly competitive, and intense use of collection facility locations and processing facilities, is the norm. If anything, more and more processing is also the norm, as the way to increase recycling, and lower landfill costs, and improve the monthly "bottom line", is to divert more and more materials from landfills and incinerators, for beneficial use and recycling.

At the same time, stormwater has become a significant issue, and drippage from vehicles and containers impacting runoff at waste facilities has become more of a concern. Sometimes it is possible to move operations indoors or completely cover operations from rainfall contact, but often, moving operations indoors or completely covering them, is not cost effective.

Modular stormwater treatment offers a reasonable solution for most sites, so StormwaterRx's modular units, are receiving increased attention in the waste industry. More practical and more cost effective than custom built systems, for most sites, StormwaterRx modular systems can be implemented and functioning, within days of delivery. Further, StormwaterRx systems can be placed aboveground in many instances, and only one manhole or collection area has to be excavated, minimizing site and earthwork costs.

The ad below was recently run in leading waste industry magazines.

Based on performance at dozens of sites where recycled materials are routinely managed, StormwaterRx modular units provide a solid foundation bringing cost-effective stormwater treatment technology to the waste industry.

**Without stormwater treatment,
even a little rain is a big liability.**

Fortunately, our industrial stormwater treatment systems remove dirt, oil, metals, soluble organics, phosphorus, bacteria and more. We offer basic and enhanced treatment including the world's most highly advanced systems. Ask what system is right for you. Call now.

Call now: 800.680.3543 or visit stormwaterx.com

For more information on StormwaterRx, call RT Environmental Services, Inc. at 215-909-0056 for Justin Lauterbach or by e-mail at jlauterbach@rtenv.com.

One of the reasons for success with implementation of StormwaterRx equipment, is integration of equipment in concert with other practical best management practices. RT Environmental brings this practical experience to site owners and operators to assure overall stormwater management program success.

For more information on StormwaterRx systems, contact:
Justin Lauterbach by phone at 215-909-0056 or email
