RT ESTABLISHES FULL SERVICE ENERGY GROUP

Press Release

As RT enters our fourth year in Southwestern PA, we have continually expanded our services to accommodate the Marcellus Shale Industry. We are current and active members of PIOGA and the Marcellus Shale Coalition (MSC). We continue to learn and tailor the work we have been doing for over 20 years to fit the specific needs within the industry. The consensus amongst the drillers, mid-stream companies and service companies seems to be that they need two things from their design and permitting consultants:

- Full service capabilities with single source responsibility.
- Experience and knowledge to move the regulatory approval process along efficiently so that permits are in hand so as to meet drilling, gathering, and transmission time frames.

Gary Brown, P.E., President of RT Environmental Services, announced, that effective December 1st, RT Environmental Services has established an industry service group with an experienced "deep bench", focused on both of these objectives.

RT's added focus for Marcellus Shale services includes:

- Pre-drilling inspections, testing and survey work.
- Pad inspections.
- Pipeline permitting
- Wetland Delineation

- Act 2 Services
- SPCC Plans
- Integration of right-of-way and utility design with erosion and sedimentation control aspects.
- Careful attention to detail when it comes to wetlands permits, endangered species, or forested buffers near streams or rivers. This can ensure permit approvals are forthcoming eliminating the need for repetitive resubmittals.
- Preparing easy to understand plans with standard details for field use.
- Furnishing a "Critical Inspection Checklist". Prepared to assist foremen and supervisors in the field thereby negating the need to review lengthy permits and applications when questions arise.

The Service Group will be headed by Justin Lauterbach, Regional Manager of our Southwest Pennsylvania Office, in Washington, PA. Lisa Mascara manages the Business Development.

Other team members include:

- John Kornig, P.E., has extensive experience in permitting activities involving the Army Corps of Engineers, integrating and expediting permit approvals with state and federal agencies. Including all types of waterway and buffer area planned construction activities.
- Greg Newell, P.E. - A heavily experienced Professional Engineer, who has worked on all types of new utility lines, and utility line extensions, for more than 20 years. In addition his experience includes erosion and sedimentation plan design and permitting, Mr. Newell experience crosses over into DEP and Army Corps of Engineers permitting as well.
- Gary R. Brown, P.E. - He has in depth experience in permit applications and debottlenecking, and, in assuring that utility design, erosion and sediment design, permit applications are complete and will gain expedited approval. When extended or complicated permitting issues arise, he can frequently provide a strategy for moving forward. If necessary, meet with senior officials, in regulatory agencies, to get focused on key issues to resolve concerns and move projects forward.

Complementing the above key team members are civil engineers, environmental engineers, environmental scientists, and wetlands specialists, who work as the RT Team. We keep you informed through weekly progress reports, a project schedule milestones and overall progress.

Already, RT has assisted with Beneficial Use approvals, and to help resolve suspect impacts on water quality, from drilling operations. We are confident that a "GO TO" project-focused approach for drilling, fracking and utility construction will assure that Marcellus Shale industry members keep their projects moving forward in 2013 and beyond.
