THE NEXT GENERATION FOR EMERGENCY NOTIFICATION

Press Release

Metis Secure Solutions, of Pittsburgh, has a new generation of emergency notification equipment, which is of considerable interest, to those who have multiple property locations, including schools, apartments, houses and office and industrial buildings. The next generation means that onscreen maps and building floor plans are available, which make it easy for users to send and receive alerts, and, direct first responders as well as guide people to safety.

Features include:

- On-screen map and building floor plans enable users to easily send and receive alerts, visualize location, direct first responders and guide people to safety
- Customized maps indicate name and location of:
 - AEDs
 - Fire extinguishers
 - Hazardous materials
 - Commonly-used exit names
- Location specific information for each alerting device (hazardous materials, lab manager's name and phone number, etc.)
- Customer specified pre-programmed alert messages included in your initial configuration
- Emergency-specific alerts can be created instantly with text to speech functionality
- Storage of every transaction enables detailed event review and historical reporting
- Tamper-detection icons appear in the Command Center alerting security personnel to device tampering or damage
- Power failure icon appears in the Command Center and the backup battery in the notification device automatically takes over
- Multiple simultaneous users with different permission levels and remote access
- Remote software updates without system downtime
- Software hosted on your server or a dedicated server at your location, or in a remote location
- Integrates with other notification and security systems to serve as single dashboard for security information

Those involved with property management should consider this system, as they rehabilitate older buildings, plan for new buildings, or are simply looking to retrofit a system, and one of the system's key feature- it's easy to use. See the photo below of the basic alerting device, to see what we mean.

For more information on the Metis Secure System contact Mike Nobers, Director of Sales and Channel Development at 412-828-3700 x1209 or mnobers@metissecure.com.
